Wiring Diagram

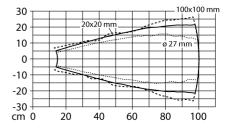

Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function.

The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-2, quadratic targets in a range of sizes (20 x 20 mm, 100×100 mm) and a round rod with a diameter of 27 mm are used.

Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions/Description

Setting the switching point

The ultrasonic sensor features a switching output with a teachable switching point. The green and yellow LEDs indicate whether the sensor has detected the object.

One switching point is taught. This must be within the detection range. In this operating mode the background is suppressed.

Easy-Teach

Connect the TX1-Q20L60 teach adapter between the sensor and connection cable

Place object at the end of the switching range Press and hold button for at least 2 s against Gnd After a successful teach-in, the green LED flashes at 3 Hz and the sensor runs automatically in normal mode

To invert the output function, press and hold the button against the Ub for 2...7s

LED response

In standard operating mode, the two LEDs indicate the switching state of the sensor.

Green: Object within the detection range but not in switching range

Yellow: Object is within the switching range

Off: Object is outside the detection range or signal loss
